

Brainstorming & Idea Prioritization

<i>Date</i>	01 JUNE 2026
<i>Team ID</i>	XXXXXX
<i>Project Name</i>	<i>OptiCrop: Smart Agricultural Production Optimization Engine</i>
<i>Maximum Marks</i>	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

<i>S.No</i>	<i>Team Member</i>	<i>Idea / Suggestion</i>	<i>Category</i>	<i>Group No.</i>
1	nyshita	Design ER Diagram, define system entities (User, Soil data, Crop, Prediction, ML Model) and prepare project workflow structure	System Design	
2	jayabhargavi	Define business problem, requirements, and analyze social & business impact of smart agriculture system	Requirement Analysis	
3	Jayabhargavi	Perform dataset collection, import libraries, read data, and conduct univariate, bivariate, and multivariate analysis.	Data Analysis (Explanatory)	
4	jyothishmathi	Handle preprocessing tasks including null values, seasonal crops, model building using K-Means and Logistic Regression.	Data preprocessing & Machine Learning	

Brainstorming & Idea Prioritization

5	vyothishmathi	Develop Flask web including HTML, backend, prediction system, testing, and deployment of OptiCrop.	Web application & Deployment	

Step 2:Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

<i>Group No.</i>	<i>Final Idea</i>	<i>Feasibility (High/Medium/Low)</i>	<i>Importance (High/Medium/Low)</i>	<i>Priority</i>	<i>Selected (Yes/No)</i>
1	Build an ML based Smart Crop Recommendation System using multiple algorithms and select the best performing model.				
2	Develop a Flask web				
3	Create a dashboard to visualize dataset, crop distributions, and model performance insights.
